DARSHIL MEHTA

Mumbai, India

+91 9324891415 darshilmehta411@gmail.com linkedin.com/in/darshilmehta411 github.com/darshil411

Education

Dwarkadas J. Sanghvi College of Engineering **2024 – 2028**

B.Tech in Artificial Intelligence & Machine Learning (Honours in AI in FinTech) | *CGPA: 9.1* *Mumbai, India*

Technical Skills

Languages: Python, SQL
Libraries/Frameworks: TensorFlow, NumPy, Pandas, Scikit-learn, FastAPI, Flask, LangChain, Langrapgh
Tools & Platforms: Streamlit, Power BI, Git
Concepts: Machine Learning, NLP, Deep Learning

Projects

AI Resume Tailoring & Interview Copilot | GitHub |Live

- Built an agentic AI career copilot that automates resume tailoring, ATS evaluation, interview preparation, recruiter outreach, and company research through a **Human-in-the-Loop LangGraph workflow**.
- Improved JD-specific resume optimization by developing a Project Knowledge Base that analyzes project documentation, prioritizes the most relevant projects for a job description, and injects compressed technical context into resume generation.
- Engineered a **stateful multi-agent workflow** using LangGraph with typed state, conditional routing, checkpointing, interrupts, and parallel execution to support resumable section-wise optimization.
- Developed a rubric-driven ATS evaluation pipeline with structured LLM scoring, iterative Human-in-the-Loop feedback, **and Tavily-powered company research** to generate targeted interview preparation and recruiter outreach.

Enterprise Knowledge Assistant | GitHub

- Built a production-style **Hybrid RAG system combining BM25 and BGE** semantic retrieval to deliver grounded, citation-backed answers across enterprise knowledge bases.
- Improved retrieval quality by implementing metadata-aware chunking**, Cross-Encoder reranking, and query rewriting**, reducing irrelevant context before LLM generation.
- Developed a scalable ingestion and retrieval pipeline with **incremental indexing, batched embeddings**, and persistent ChromaDB storage for low-latency document search.
- Integrated **Portkey AI Gateway, NeMo Guardrails (input & output), and automated RAG evaluation pipelines using Recall@K, MRR, and LLM-as-a-Judge** to improve reliability, observability, and response quality.

PARIX – Student Intervention Analytics System | GitHub | Live

- Built an AI-driven student risk analytics system on 6,000+ records using Linear Regression and K-Means clustering to identify at-risk students and behavioral personas.
- Automated intervention planning by integrating GLM-4.5 with a rule-based recommendation engine, generating personalized intervention and parent communication workflows.
- Deployed an interactive Streamlit dashboard enabling real-time student risk monitoring and intervention analysis.

Leadership & Extracurriculars

VCP Tech | *DJS IIC*

TechAI Mentee | *DJS Nova*

Events Co-Committee Member | *DJS CodeAI*
